6 Capital Improvements

Jonathan Estey, Manager of Plant Operations and his staff have done an incredible job bringing our infrastructure projects into place. These “behind the scenes” projects aren’t always as visible but are great improvements for the health of our patients and employee pride. Our Emergency Department / Diagnostic Imaging renovation project will ultimately include a radiology office, waiting room, support spaces and ICU areas. We are excited about these changes. Please pardon the dust!

7 Lab Analyzer Replacement

A Lab Analyzer is a medical device that can help optimize our laboratory’s reliability and performance. Our plan to update the device has been submitted to the state and permitting is in process.

8

Children’s Health and Wellness Center

This clinic expansion is nearly complete. We anticipate opening as soon as our licensing and approvals are finalized. Our pediatric-specific clinic will create a warm, welcoming environment that helps children feel safe and comfortable — with a focus on healthy growth and development.

9 Medical Air Compressor

Compressors play a crucial role in hospital air systems delivering the air that we breathe and minimizing the spread of contaminants. Upgrading our compressor is a great improvement to patient and staff safety.

10 OR Air Balancing

We recently completed a project to repair air balancing for the OR, Med/Surg, ED and Diagnostic Imaging areas. You may have seen the large crane in the parking lot lifting the new coils onto the roof.
